

Jordan University of Science and Technology (JUST) offers a range of master's degrees tailored to address pressing environmental challenges through sustainable practices. The Master of Science in Civil Engineering with a specialization in Water Resources and Environment equips students with the expertise to tackle issues related to water management and environmental conservation. Similarly, the Master of Science in Mechanical Engineering focuses on Renewable Energy and Sustainable Development, preparing graduates to innovate in the field of clean energy technologies. Additionally, the Master of Science in Natural Resources and Environment concentrates on Soil, Water, and Environment, providing students with a comprehensive understanding of ecological systems and sustainable resource management strategies. These programs at JUST empower students to become leaders in promoting sustainability and environmental stewardship, crucial for addressing global environmental concerns.
